3D Digital Twin Solutions

Lidar and GIS Platforms

XYGO®

we know the way

With more than 28 years of experience, **XYGO** is providing innovative and disruptive 3D Infrastructure Management Solutions throughout Latin America and EEUU, recently opened an office in Florida USA.

XYGO, is leading the latest generation of business solutions based on 3D Digital Twin Models and GIS Platforms, combined with Lidar Mapping Mobile Technologies and Drones. XYGO provide this for organizations that need to generate, maintain, and inspect their physical infrastructure and/or need to develop a smart cities concept.

XYGO® stands out for being an ally of the utilities companies of various fields such as water, gas, power and telecommunications sector, together with cities and the strategic departments of the municipal government that manage urban infrastructure.

80% Saving time in surveying.

Up to **60%** Saving time data digitization and classification.

0% Reprocessing in field task.

Our solutions help customers resolve business problems using digital twin data with artificial intelligence, machine learning, clash detection, automatization, and other disruptive technologies. This allows for time and cost savings with great quality and reliable results.

At **XYGO**, we have worldwide power distribution customers like ENEL Group in Chile, Colombia, and Perú, Chilquinta and Compañía General Electricidad "CGE" in Chile, both subsidiaries of State Grid Corporation of China (SGCC) and Electrodunas in Perú. Movistar, Claro in Chile, Argentina, Paraguay (Telecommunications), Abertis (Concession Highways) and some cities and governments departments across multiple countries.

- Replaces field work.
- It allows to measure, georeference and cube assets.
- Generates historical backups and the evolution of projects.
